EDUCATION

University of Toronto

Bachelor of Applied Science, PEY Co-op

Major: Electrical and Computer Engineering

Sep 2023 – Apr 2028 (Expected)

cGPA: **3.83/4.0**

RESEARCH & ENGINEERING EXPERIENCE

Software Engineer Intern

May 2026 – Present

Microchip Technology

- Develop research-driven FPGA EDA tools for PolarFire 2, focusing on timing and power analysis.
- Explore AI- and LLM-assisted approaches to interconnect timing modeling and design automation.

Research Intern

Dec 2025 – Present

University of Wisconsin–Madison | Advisor: *Prof. Xiao Luo*

- Investigate LLM post-training and its application to AI agents.

AI Research Intern

Jan 2026 – May 2026

Memories.ai

- Researched LLM post-training and long-video understanding for persistent visual intelligence.
- Studied memory-augmented models that retain useful visual context across extended video sequences.

CURRENT RESEARCH

Odyssey-JEPA | Long-Horizon Visual Control

Ongoing

Research collaboration with the Tsinghua IIIS group

- Develop variable-duration action representations and an autoregressive action generator within a JEPA world model for goal-conditioned visual control.
- Implement mixed-horizon training, Student Forcing, and actor-guided CEM planning; build controlled evaluations across PushT, Cube, Reacher, and TwoRoom.

ACADEMIC SERVICE

Reviewer: WACV 2027; LCFM Workshop @ NeurIPS 2026.

SKILLS

Languages: Python, C/C++, Java, JavaScript, MATLAB, Verilog, SQL, Bash

Technologies: PyTorch, TensorFlow, Hugging Face, Git, Docker, Linux
